WHAT'S HOT? 9300 PSI Side Curtain Inflators

Buick introduced in the 2007 Lucerne a new pressure vessel for their side air bag curtains. 9300 psi pressure vessels now exist in the roof line of new car technology. This is a major change as it is up from the previous 4000 psi series. Today's, firefighters more than ever before must consider their **"personal safety"**

When cutting into new high tech vehicles. Yes, you can purchase books and computer programs that will illustrate where to find all air bag components, however, nothing ensures firefighter safety better than the **"PEEL & PEAK"** procedure. **"Think before you cut."**

“DID YOU KNOW!”

That Hybrid type vehicles are now in the shipping industry. UPS brown, FED EX and Peterbilt have now gone green!

Wal-Mart, the retail giant has taken delivery of its first Peterbilt Model 386 Hybrid. The 386 Hybrid is the truck maker's (and the industry's) first Class 8 hybrid rig.

The hybrid systems were developed by Eaton, and they work as you'd expect them to. Braking energy is captured and stored in the system's batteries, which provide juice to the truck's main electrical system, accessory systems, and a generator/motor that gives the vehicle extra torque and helps extend its overall range. When conditions allow, the rig can even run on batteries alone.

The batteries employed in the three trucks are Lithium-ion. Lithium-ion batteries are capable of faster recharging and have a longer life than batteries used in previous generations of HEV's. The truck bodies will be identical.
