

## General Recommendations

### Liquid Nitrogen Solutions:

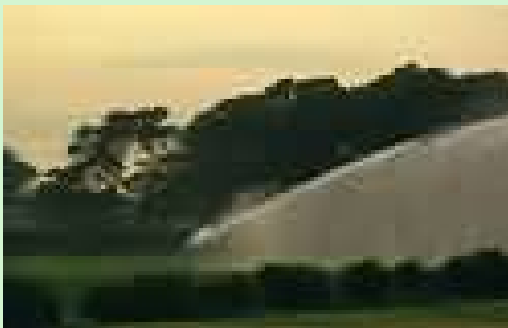

**Liquid Calcium 30** can be applied at a rate of 2-5 gallons per acre.

### Soil Applications:

**Liquid Calcium 30** can be applied at a rate of 1-3 gallons per acre.

### Foliar Applications:

**Liquid Calcium 30** can be applied at a rate of 2-5 gallons per acre.

## Liquid Calcium 30

Is a concentrated product with **30% PURE** calcium carbonate. At time of mixing and application you can cut **Liquid Calcium 30** and get a larger application rate.

## “CALCIUM AVAILIBILTY”

**Will help you grow a better crop and a better bottom line.**

**Liquid Calcium 30:** Is a chelated Natural calcium carbonate liquid made to be delivered to crops through ordinary field spray equipment, crop dusting or irrigation systems.

**Liquid Calcium 30:** Is a chelated calcium that is available for crop utilization. The available calcium activates the uptake of other crop nutrients.

**Liquid Calcium 30:** Will show first season instant results rather than waiting the 6-12 months for dry lime to begin working.

## What makes Liquid Calcium 30 Important to Plants?

- ◆ Calcium feeds soil bacteria and is also essential for strong plant cell development.
- ◆ Calcium helps the movement of N-K-P to plants.
- ◆ Calcium is the *most needed element* for microbe activity in soil.
- ◆ **LIQUID CALCIUM 30** is deliverable to your crops.

## Why is Ag-Lime not doing the job?

- ◆ Rock **Mined Limestone** just sits in the soil and acts like sand
- ◆ Rock **Mined Limestone**, even when generously applied, can still show a low pH
- ◆ Rock **Mined Limestone**, contains silica a known carcinogen
- ◆ Rock **Mined Limestone** will not, in most forms, be deliverable to your crops using spraying equipment or liquid drip systems
- ◆ When your calcium is not available to your plants, it's **JUST A ROCK!**

## How can you apply LIQUID CALCIUM 30?

Liquid Calcium 30 can be applied using aerial application, irrigation systems or ground spray methods.

Liquid Calcium 30 can be mixed in tanks with most soil applied herbicides, nitrogen solution, liquid fertilizers and other farm chemicals.

No extra trips across the fields are generally required!

**ALWAYS JAR TEST ALL MATERIALS FOR COMPATIBILITY**
